Hyper Wide Light Dynamic
Mini Cube Color Camera

HYPER HD DYNAMIC

As the newest addition to the Ikegami Hyper Dynamic Camera Series, Model ISD-A14 features an extremely wide light dynamic range, high sensitivity and high resolution enabled by a 1/3-inch Pixim Seawolf sensor and Ikegami's digital processing technology. It is a Hyper Wide Light Dynamic Range Mini Cube Camera that reproduces a clear and natural image even in locations where there is a significant difference in the intensity of illumination, such as window areas, or in lobby entrance of building. ISD-A14 comes with a compact cube body, giving it the flexibility for a broad array of locations and equipment, such as ATM machines and outdoor housings.

FEATURES

Hyper Wide Light Dynamic Range (Hyper WDR)

The Hyper WDR function provides for very effective compensation of high light and dark areas in screen. This situation may occur generally outside or viewing from indoor to outside scenes. Even in large light fluctuations, bright-and-dark objects can be captured and viewed clearly with a natural color.

Scene File Function (4 positions)

Along with a normal setting (NORMAL), 4 position scene file (preset file) for each particular scene is provided. Using this function enables an easy setup suitable for a scene without any special adjustment.

Compact Body of Super Cube

This camera comes with a compact cube body, that is suitable for the locations such as ATM machines.

High-quality Picture and High Resolution

The camera is designed for smear-free imaging and low noise. The well-designed DSP, Digital Signal Processor, effectively enhances details, which achieves crisp and sharp images with a high signal-to-noise ratio. The high resolution of a horizontal resolution of 520TVL (690 HTVL-Effective) is assured.

Control Board for Local Setup (Option)

SUT-A14 Control Board for local setup is available as an option.
